# Review of the **BOSE** QC25

*“The QC25 model takes Bose’s already stellar noise-cancelling headphones and levels them up to new heights.”*

CNET

New ‘Bose QC25’ taking the music industry by storm. But are the new headphones worth buying? You decide...

## **What are Bose QC25?**

So, we can start off with explaining what the Bose QC25 is. The QuietComfort 25 headphones by Bose are revolutionising the music industry with their noise cancelling technology and flush design. The price tag of these headphones is definitely quite bulky, however critics absolutely adore the product and media website ‘CNET’ came out with a review stating that “The QC25 model takes Bose’s already stellar noise-cancelling headphones and levels them up to new heights.”

Well let’s talk about the...

## **Design and Features**

These headphones come with a very broad range of features for the admittedly hefty price. For example, these pieces include: a carrying case, complete noise-cancelling, foldable model, clearer and more dynamic sound, and most importantly, an easy design completed with leather ear cushions to provide extra comfort. The whole piece only weighs 196 grams which

makes it substantially lighter than any of its close rivals such as Beats or even Sony. Unfortunately, these headphones are wired and do not support Bluetooth unless you purchase third-party adapters which can sometimes be expensive and inconvenient. For the large sum of around £220, you would expect the headphones to at least be Bluetooth, but this is made up for with the upgraded quality of not just the sound but also the material that it’s made from. It is designed and composed of very durable plastic along with real leather on the ear cushions.

## **Should you Buy the Bose QC25’s?**

The Bose QC25’s are by far the best headset on the market and while it is technically designed for use in music studios, the headset is just as useful at home. With the handy noise-cancelling you can incorporate its crisp and innovative sound technology into your day to day life. So why wouldn’t you splash out a little bit of extra cash on this product? If everyone else loves it, you will too.
